Object: Recycled material (Scrap) and CO2 per tonne declaration

ENGLISH

Information about the company

Acciaierie Valbruna SpA (next only Valbruna) is a leading European producer of special steel and nickel alloys. Valbruna melts and manufactures in Italy.

The stainless steel production is based on scrap, making Valbruna one of the larger Italian recycler of stainless steel scrap. Customers are generally leading manufacturers in their segments, which place high demands on the properties and quality of the stainless or special steel supplied.

Climate declaration

As per Directive 2003/87/EC of the European Parliament and of the Council establishing a scheme for greenhouse gas emission allowance trading within the Community and amending Council Directive 96/61/EC (Emission Trading Scheme), Valbruna measures and declares yearly the total CO2 emitted (Scope 1) with a medium level of about 300 Kg CO2 /ton of produced stainless steel.

Other environmental information

The use of selected stainless steel scrap for the melting recovery and production is able to guarantee that more than 95% of the new material is produced from recycling of metal scrap. Valbruna receive this scrap only in conformity with the End of Waste Regulation - COUNCIL REGULATION (EU) No 333/2011 of 31 March 2011 establishing criteria determining when certain types of scrap metal cease to be waste under Directive 2008/98/EC of the European Parliament and of the Council.

More information about the environmental impact of Valbruna product, corresponding to this declaration is available on request.
